

Course: Lean Management course**Duration:** 1 Day**Venue:** On-site**Purpose:** To provide participants with an understanding of the principles and tools applied when implementing Lean.**Participants:** Senior Supervisors, Engineers and all Managers. Before a lean implementation begins it is important that all key employees receive training on Lean to understand the concepts, principles and have an appreciation for the tools to be deployed during a Lean transformation as this can radically change the way the organization is run in the future..**Competency Empowerment:**

The course is designed to introduce Lean concepts and provide guidance on the implementation of Lean. It will cover a number of areas as follows:

- Address the generic challenges now being faced by the various industry sectors
- Plot out a methodology for addressing the above challenges
- Lean Principles
- Value Stream mapping
- Change Management
- Team formation
- Lean Simulation
- Establishment and sustainment of continuous improvement environment

The course is presented by Lean practitioners who have many years experience of Lean implementation a wide variety of organizations. The content is practical as the presenters draw from their past experiences. The course will also be interactive and will include a simulation of changes made to a process, measuring the effects to determine the optimum setup.
