

Course: **Lean Principles**

Duration: 1 day

Venue: On-site

Purpose: To provide participants with the Principles and Strategy necessary to change the culture of an organisation to bring about dramatic improvements to key metrics.

Participants: The course is intended for anyone planning to get involved in a Lean Deployment including:

- Production Operators
- Process Engineers
- Production Supervisors
- Line managers
- Top Management

Competency Empowerment:

Participants will be provided with the knowledge of each of the 5 key principles involved in a lean implementation. These are :

- **Specify value** from the customers perspective
- **Map the value stream** for each product family ensuring each step has a value-add element to it
- **Value flow.** Arrange the value added steps above in a logical order
- **Pull value.** Change the philosophy of the organization from pushing output to the next step to instead pulling product or service from the previous operation
- **Perfection.** Implement a continuous improvement culture in the organization where everyone is aiming to eliminate waste and strive towards perfection.

The principles of Lean lay the foundation for any successful Lean implementation. It is therefore important they are clearly understood.
